Dr. William D. Hobbs
Chairman, The Council for Tobacco Research - U.S.A., Inc.
900 Third Avenue
New York, NY 10022

Dear Dr. Hobbs,

Our recent research has focused on compounds able to prevent formation of or to intercept and inactivate a variety of mutagens/toxic agents/prospective carcinogens. Some recent abstracts are attached. Should you feel that these approaches would be of interest to The Council for Tobacco Research-U.S.A., Inc., I would greatly appreciate receiving guidelines and any necessary forms for possible submission of a research proposal that would focus on tobacco-related mutagens, of which there are quite a few (unfortunately, as a cigarette smoker myself).

Thank you.

Sincerely yours,

Philip E. Hartman
